HP launches ‘State Project Monitoring Portal’

Shimla, Jun 30 (PTI) Now information about the stalled projects in Himachal Pradesh by both the public and private sectors will be just a click away with the government today launching a portal to monitor their progress.

Himachal Chief Secretary P Mitra today launched the ‘State Project Monitoring Portal’ view to put in place an institutional mechanism to track stalled investment projects, both in the public and private sectors.

The online Project Management System has been developed by Cabinet Secretariat Informatics Division (CSID) of Cabinet Secretariat of the Government of India.

Chief Secretary said that the Project Monitoring Cell for the State has been established in the Planning department and it would be linked with the CCI-PMG portal of the Cabinet Secretariat.

The project will be instrumental in monitoring projects, with investment from Rs 100 crore to over Rs 1000 crore initially, in both government and private sectors and this would also be very useful in saving the money and time.

He said this system would automate the entire tracking of stalled investment projects in the context of the bottlenecks which would include submission of a new project, editing or updating the projects, reviewing the projects, submission of details relating to bottlenecks, conducting Sub Group meetings and to take decisions for removing the implementation bottlenecks in the stalled investment projects.

Mitra said that this system would also help in redefining processes for effective tracking and resolving issues using a central interface.

It would also provide integrated services in transparent and fast manner, and accurate information to the government for strategic decisions. It would also generate various MIS reports including financial and summary report.

“Every concerned department would have its nodal officer to deal with queries and updating the details of the projects who would be imparted training about the software by the CSID,” he added.
